

Lemmings

By Sienna

Today I will tell you about Lemmings! I hope you enjoy and learn a lot about Lemmings

Habitat

Lemmings live in cold northern Canada. They make tunnels and live in borrows. They also have sleeping rooms even bathroom's. Lemmings inhabit cold northern parts of the world.

Body

Lemmings look like fat furry hamsters. Legs and claws are useful to Lemmings and are very strong for digging. Thick fur keeps the Lemmings warm in winter.

Food

Lemmings eat :moss,plants,roots,berries and lichens
They store seeds for winter. Lemmings make paths to
find food. Such animals as birds,weasels and foxes eat
Lemmings.

Life Cycle

Female Lemmings have up to 8 babies. Lemmings live two years. Lemmings make nests. Babies can walk in about 15 days. Lemmings make nests out from grass, feathers, and musk oxen fur.

Fun Facts

- Lemmings are fast runners.
- Lemmings are good swimmers.
- Lemmings feet grow bigger in the winter and smaller in the summer
- Lemmings migrate when food is hard to find

- Lemmings make bowl shaped nests of grasses and seeds
- Some people believe that large groups of Lemmings throw themselves from cliffs but Lemmings do not deliberately kill themselves

I hope you learned a lot about Lemmings and I enjoyed the book.
