# PUFFINS

---

By Miles

---

# INTRODUCEN

---

I here to teach you all about puffins.

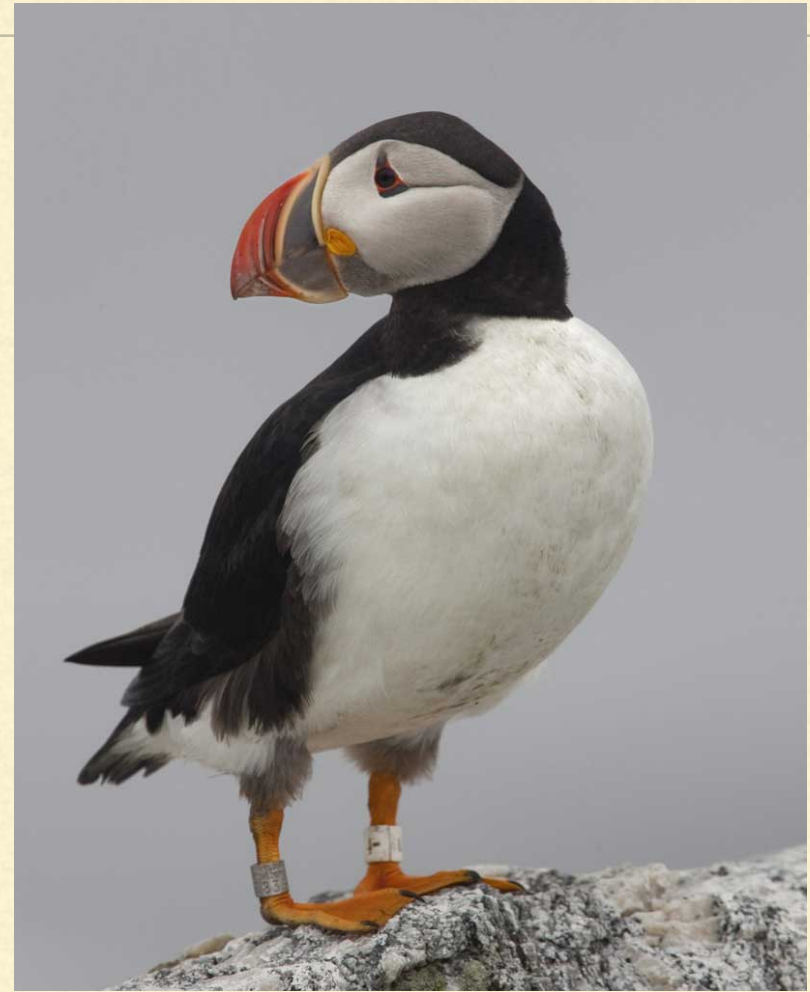

---

# BODY

---

Puffins are black & white birds with wedged feet. Puffins are about the size of a parrot.

---

---

# HABITAT

Puffins live in cold northern areas. Most puffins live alone in the winter but in the summer most puffins nest in large  
Coleens.

---

---

# FOOD

Puffins have sharp long beaks to catch small fish & sand eels.

---

---

# LIFE CYCLE

---

Puffins live about 20 years. Female puffins lay eggs in about 48 days. The egg hatches in about 2 weeks. The puffin can fly in 3 weeks after hatching.

---

# FUN FACTS

---

Puffins kiss by rubbing their beaks together. Puffins are also known as sea parrots
